DETAILED ACTION

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alstermark et al (WO 03/051826 A1) in view of Rossen et al (5,663,341) or Alstermark et al alone.

Applicants claimed invention is directed to a process for the preparation of substantially racemic 2-{{2-(4-hydroxyphenyl)ethyl}thio}-3-[4-(2-{4-[(methylsulfonyl)oxy]phenoxy}ethyl)phenyl]-propanoic acid which comprises reacting 2-{{2-(4-hydroxyphenyl)ethyl}thio}-3-[4-(2-{4-[(methylsulfonyl)oxy]phenoxy}ethyl)phenyl]propanoic acid enriched in one enantiomer with a base in an inert solvent.

Alstermark discloses a racemic mixture of the instant claimed compound.

Alstermark is silent with respect to the conversion of the specified enantiomer to a racemic mixture. The conversion of an enantimeric compound to a racemic mixture is well known in the art. For instance, Rossen teaches an enantimeric of a compound dissolved in a solvent (THF) in the presence of a strong base (potassium tert-butoxide) and heated for 3 hours to obtain a racemic mixture.

It would therefore have been obvious to one of ordinary skill in the art at the time the invention was made to prepare a racemic mixture by dissolving the enantiomeric of that compound in a solvent in the presence of a strong base to obtain a racemic mixture, which can be used as an intermediate for preparing other chemical compounds as suggested by Rossen et al.

An additional racemization step in an otherwise known process is not a patentable modification. Brenner v. Ladd, 147 U.S.P.Q. 87, 90 (D.C. 1965).
